Business Situation
OKD Fire and Rescue Services is the specialized squad for network of mining companies under NWR corporation. OKD FRS consists of more than 100 rescue, paramedics and mechanics conducting 350 medical aid and rescue invasions in subsurface locations and in extreme conditions. Company operates more than 200 high-tech equipment and machinery. To effectively manage and synchronize the rescue squads, machinery and invasions, OKD FRS was looking for flexible and agile BI application to extend its software portfolio.

Challenges
- Lack of reporting capabilities with existing SAP HR and PP/PS software to support employees' administration.
- Great importance on strict data security policy within the company.
- Advanced access control and management for analyzing and working with collected data.

Solution
- Single BI platform on top of the existing SAP installations to manage the HR agenda.
- Hundreds of reports included employees' segmentation, salaries, bonuses, attendance, absences or injuries analysis.
- Agile reporting for operational purposes, analyzing equipment, medical aids, rescue invasions and other commercial activites.
- Precise security and access management rights to protect sensitive employees' information.
