Features not present in Tableau at all.

1. **Purely web based (only one single installation to scale) - no desktop clients to manage, no publisher server to install**
2. **ETL (DWH, Data cleaning, scheduling) - enterprise wide deployment BI**
3. Platform SDK/API - power to customize and develop totally new own apps
4. Social network - comments, sharing of reports (without deploying on server)
5. Report versioning, history, time-machine
6. Flexible licensing setup (very friendly license cost for enterprise-wide deployment)
7. Communicate with developer center directly - developed as well directly in Singapore
8. **BellaDati = product producer + project delivery**
9. DWH based on PostgreSQL and wrapped with Hadoop, MongoDB layer
10. Mobile BI is included in the license
11. Joining of data sets in GUI - to build real DWH
12. User interface customization without coding (css, logo etc.) white-labeling
13. Funnel chart out of the box, very easy build - must to have for user insights
14. Report are not published. You can change them anytime with immediate response from your co-workers. Everything is web-based.
15. Custom content on reports dashboards (video, pictures,etc.)
16. Integration with SAP Hana & predictive analytics
17. KPI localization in multiple languages ad-hoc
18. Innovative 2012 robust enterprise web technologies (proved by RedBull, NWR, Ricoh...) easy to update, modify/versus desktop-web hybrid from 2003 slow to modify
19. Test environment server license for free
20. Module to build and analyze surveys (Mobile or Web based)
21. Seamless building of reports, that you change anytime - not IDE based like Tableau
22. QuickCharts - generate chart directly from Table
23. Back-up of all data. Yes (open formats). Whole DW, OLAP Cube back-up.No proprietary lock-in
24. No windows license necessary. BellaDati server runs on (runs on any system, Windows,Linux, Mac), Tableau server only runs on Windows.
