

# Dashboards

## Overview

**Dashboards** are the entry point of BellaDati Business Intelligence solution. They typically comprise of the most important charts and tables pulled out from the more detailed **reports**. Therefore, they are primary designed for **managers**, who need brief overview of company's actual performance.

## Navigation

It is possible to navigate between dashboards by using a drop-down menu on top of a dashboard page or by using the search page.

### Navigation by drop-down menu

Users can navigate from one dashboard to another by using a drop-down menu in the top right corner of each dashboard.

## Navigation by search page

Users can also list all available dashboard on the search page by filtering the result to display dashboards only.

## Dashlets

Every **dashboard** is composed of several **dashlets**. **Dashlet** is a piece of content, including either report's views or navigation items. **Dashboard** can be customized by adding **dashlets** and adjusting their visualization.

**Dashboards** can be enriched with arbitrary attachments as well as shared for public via web.

## Use cases

**Dashboards** allow to visually compare data from different reports and therefore data sources. Consider using [Reports](#) if you are an analyst and need to perform detailed data analyses.

## Dashboards

---

## Reports

---

**Dashboards** are determined for uses who prefer consuming prepared insights. They usually combine existing **views** and **navigation items** to create their own customized workspaces.

**Dashboards** are not designed for direct work or analyses of data. Consumed content is prepared in **reports** by **analysts**.

Typical user includes:

- Executives
- Managers

To learn more about **Dashboards** proceed in this chapter.

**Reports** are determined for users who work with data, prepare reports and execute analyses. Users usually select **Indicators**, define **Drill downs** and visualize them in appropriate **View types**.

Work with **reports** requires deeper knowledge of data.

Created content can be consumed in **dashboards** by **managers**.

Typical user includes:

- Analysts
- Specialized employees
