Release date: October 12, 2012

Preview

New Features

- Maps support
- Fully configurable GEO point and shape mappers
- Drag&drop dashboard layout
- Scatter chart support
- Report layout - horizontal resizing support
- New locales support - ES, PT, NL

Improvements

- Report - Allow to reset views height during layout change
- Cache translated names
- Maps - Include predefined regions and points
- Dashboard - Enlarge the width for dashlet header
- Add Google Play icon to BellaDati login page
- Report - Improve comments and attachments GUI

Bug fixes

- Data set - Creating import preview for Excel file is very slow
- Core - estimated rows count doesn't work correctly in PostgreSQL 9.2
- Scrolling wide tables horizontally causes the losing scroll bar focus during data load
- Report - Deleting view in the report in one browser tab and saving layout in another tab results in endless loader
- Report layout - Views placement to layout cells are swapped
- Report - wrong layout when using sample data reports
- Report, filter variable - hidden attributes are shown
- Thermometer chart is displayed wrong
- Import, transformation scripting - Previously used script is shown only after clicking into the field
- JavaScript problem on add dashlet form
- Popup calendar works wrong - months are shifted
- Data set - More filters in data browser are slightly overwritten
- Filters - Attribute names are not sorted alphabetically
- Report, table - Using predefined drill-down path locks popup
- Report, chart - Indicator line style is not reflected when color manually set (filled area)
- Data set - Disable join overview page refresh after data rebuild when popup active
