BellaDati 2.9.10

RELEASE NOTES BELLADATI 2.9.10

Release date: March 5, 2019

NEW FEATURES

- Administration - IoT Admin and User Manager roles
- Report, Maps - Add option to change the location marker
- Report, Maps - Add option to display points as a polyline
- Data Set, Remote Storage - Add support for MSSQL V11
- License - Enable a maximum number of views per user and domain
- Domain administration - Add a parameter to disable notification window after login
- Extensions - Allow setting order while using readDatasetData method in endpoint

IMPROVEMENTS

- Japanese translation improvements
- German translation improvements
- Data sources - Store passwords encrypted
- Libraries - Upgrade Apache POI from 3.17 to 4.0.1
- Data sources - Display custom connectors first in the list
- Administration - Improvements for import of users from CSV
- REST API, Filter Views - Improve support of operation COUNT
- Dashboard - Don't add Getting started dashlet for users without any roles
- Login URL - Enable access to the login page without customlogin in the URL
- Export to Excel - Add support for charts, maps and KPIs
- SQL Connector, Local Data Sets - Add support for SQL conditions
- REST API, GET Report Comments - Add support for parameters offset and size
- Users, Multi-domain mode - Global admin should not be able to create new objects
- Administration - Create service, which will automatically delete old public.members_* table
- Report, Time interval with datetime attribute - Use only time for availableFrom and availableTo
- REST API - Move public.access_token_session_* to fixed table common.access_token_session
- Domain restore - If attribute used in the join does not exist, display meaningful error in the log file
- Unattended installation - Enable automatic load of the backup when the license ID is not specified

BUG FIXES

- Email server with SSL not working
- Windows Installer - Installation on new machines fail
- Report, Email export - Large tables cause email is not sent
- Report, Export - Very large tables are not exported to Excel
- Administration, Send email - Login alert is sent to inactive users
- Data set - Indicator codes are limited to 24 characters instead of 26
- Report, View filter - Combination of COUNT and EQUALS does not work
- Report group shared with user and with user group is not shared correctly
- Report, Email export - Image names are wrong when special characters are used
- XML Backup - When associated views point to a non-existing view backup cannot be created
- Report, Formula sorting - If sorting table members_* is deleted, views are not rendered
- User directory cannot be opened when the destination SQL server is not available
- Administration - Restart cleanup does not restart cleanup but executes cleanup instead
- Cleanup service - Execution is stopped when an error occurs during the execution

APPS

- IoT Console 1.2
- eCall Console 1.2.3
