

BellaDati 2.9.5

RELEASE NOTES BELLADATI 2.9.5

Release date: May 15, 2018

NEW FEATURES

- Data set - Bulk changes in the data set
- HTTP Connector - Login with cookie authentication type

IMPROVEMENTS

- User detail - Improve logins overview chart
- Data set, Data browser - Improve behavior with context actions
- Data set, Data browser - Remember scroll position when sorting data
- Export schedule - Display domain (user) time instead of server time
- Data sources, SQL - Use getObject instead of getString while getting value from result set

BUG FIXES

- REST API, JSON import - ETL name is ignored
- Report - Table formula formatting is not working
- Report - Conditional Formatting - Missing Key localizedDouble
- Progress bar - Static progress displays 100 instead of the correct value
- Change of the export schedule from the dashboard is not reflected in the system
- Search, Data sets page - Users without edit rights should not see permission details
- Report - Filter with select component - default option is displayed when "all" is selected
- Report - Table formula applied on empty formula indicator causes slow loading and freezing of BellaDati
