

BellaDati 2.7.12.1.1

Release notes BellaDati 2.7.12.1.1

Release date: May 5, 2015

Improvements

- Report, export - rename A1-A4 to smaller, normal, large, extra-large
- Cluster - add logging to system nodes setup
- Report, formula - don't show exclamation mark when formula fails
- Report, export - set A3 to default export size
- Report - Filter - Date variable - Relative date picker in Variables and filters pop-up window should look the same as in left Variables and filters panel

Bug fixes

- Report, Combined chart - it is not possible to change appearance settings for bar charts
- Dashboards are shared across the domains
- Import settings - screen freezes when resetting particular column or using "proceed with action"
- Report - View - Filtering by attribute count does not work
