

## **BellaDati 2.8.4**

# RELEASE NOTES BELLADATI 2.8.4

Release date: January 11, 2017

## NEW FEATURES

- Report tabs
- Report filters - Quick filters
- Extensions, Endpoint - Add support for creating users
- Extensions, Endpoint API - Add uploadImage function
- Report, Charts - Support interline character wrapping on Y-axis

## IMPROVEMENTS

- Report, Filter - Add option to filter datetime data relatively
- Extensions - Create separate servlet to handle extension content and endpoints
- REST API - Create endpoint to get image from Media Gallery
- Administration - Provide function to restart the cleanup service
- REST API - Send associated views in the JSON response

## BUG FIXES

- Export to Excel with large number of rows contains unreadable content
- Layout - ImageView fails if image does not exist
- Extensions - Domain admin in multi-domain environment cannot upload extensions from ZIP file
- Linux - Cannot deploy/start BellaDati with tabula.jar
- Report, Filters - If default display method is used, default values do not persist after making changes in the second report
- Report, Filters - If default display method is used, selected default values are not displayed
