

Examples (IoT Data Collector)

Examples of Load balancing option

There are a couple of options - Hardware or Software based Load balancer. HW is the preferred of course.

1. Usually, the infrastructure/cloud provider provides Load Balancing services.
2. Setup a Hardware Load balancer: F5, Cisco, Citrix etc. F5 is quite cheap and offers the desired functionality. Some better switches are supporting the Load balancing as well.
3. Setup a SW Load balancer: e.g. vSwitch on VMware, load master on Microsoft Hyper-V etc. These are let's say acceptable solution. Other manually installed and operated SW load balancers are not suitable for the enterprise.

Usage examples
